DBMS

5 Min YT Lecture

Date: / /

Page No.

OLAP	OLTP
→ Online Analytical Processing	→ Online Transactional Processing
→ Historical Data	→ Operational Current Data
→ Analyse large volumes	→ Manage & process real-time transactions
→ Large storage Requirement	→ small storage Requirement
→ Trend analysis, behaviour prediction	→ payment processing & order mgmt & processing

* 2-tier Architecture :-

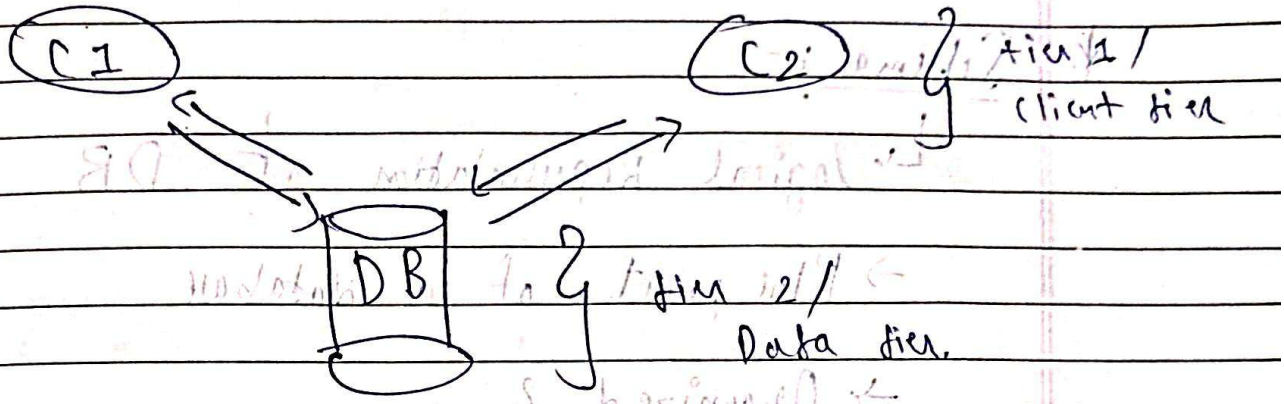

→ client server Architecture

→ Client tier & Data tier

→ Easy But Slow

→ Direct Connect

→ Less Secure. (Because client gets direct access to DB & clients can misuse data).

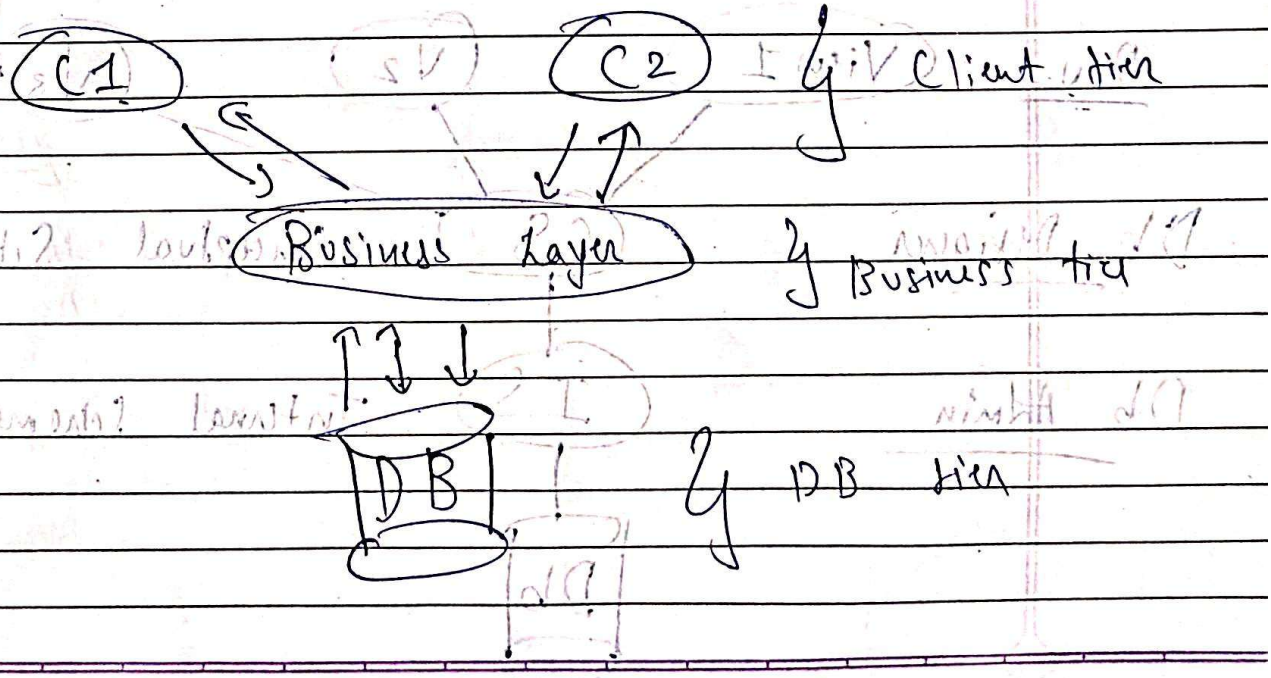

* 3-tier architecture :-

→ Client tier, Business tier, data tier

→ Complex but fast.

→ No direct connect.

→ More Secure.

* **Schema :-**
  - Logical Representation of DB
  - → Blue print of a database
  - → Organized
  - → Relation & Constraints
  - → Implementation by SQL (RDBMS)

* **Instance :-** Information in Db at a given moment.

* **3 schema architecture :-**
